

Appln. No.: 09/630,534  
Amendment Dated September 8, 2005  
Reply to Office Action of July 1, 2005

MATP-598US

**Amendments to the Claims:** This listing of claims will replace all prior versions, and listings, of claims in the application

Listing of Claims:

1. (Currently Amended) In an apparatus for displaying program guide information and a cursor on a grid showing a channel axis and a time axis, with each program positioned at a location in the grid representing a channel of transmission and a corresponding time of transmission, the apparatus responsive to a user action command corresponding to an action key associated with a user interface, a method for rapidly accessing the program guide information at a desired new time of transmission, comprising the steps of:
  - (a) displaying the program guide information;
  - (b) placing a plurality of time selection fields on the display, the plurality of time selection fields representing respective incremental time indexes having respectively different magnitudes;
  - (c) selecting one time selection field of the plurality of time selection fields by positioning the cursor on the one time selection field;
  - (d) activating the selected time selection field to determine the selected incremental time index responsive to receipt of the user action command while the cursor is positioned on the one time selection field;
  - (e) calculating a new time of transmission for display by adding the selected incremental time index to one of the times of transmission currently displayed; and
  - (f) displaying the program guide information at the new time of transmission.
2. (Previously Presented) The method of claim 1 wherein the plurality of time selection fields includes a page field, a day field and a date field; and

the page field is adapted to provide a six-hour time index, the day field is adapted to provide a 24-hour time index, and the date field is adapted to provide a seven-day time index.

MATP-598US

3. (Previously Presented) The method of claim 2 wherein step (d) determines a magnitude of the selected incremental time index and the method further includes the step of activating one of first and second direction inputs to determine an arithmetic sign of the selected incremental time index.
4. (Previously Presented) The method of claim 1, wherein step (f) includes displaying the program guide information at a current time of transmission, if the calculated new time of transmission is earlier than the current time of transmission.
5. (Previously Presented) The method of claim 1 wherein step (f) includes displaying the program guide information at a latest time of transmission, if the calculated new time of transmission is later than the latest time of transmission, the latest time of transmission corresponding to the latest program guide information stored in the apparatus.
6. (Original) The method of claim 1 wherein the apparatus is implemented in a set top box.
7. (Previously Presented) The method of claim 1 wherein the apparatus includes a computer coupled to a network for receiving program guide information from the network.
8. (Currently Amended) An apparatus for displaying program guide information and a cursor on a grid showing a channel axis and a time axis, with each program positioned at a location in the grid representing a channel of transmission and a corresponding time of transmission, the apparatus responsive to a user action command corresponding to an action key associated with a user interface, the apparatus comprising
  - a display for displaying the program guide information for a current time interval;
  - a memory device for storing the program guide information; and
  - a processor for processing software for accessing the program guide information, the software including:

Reply to Office Action of July 1, 2005

MATP-598US

a plurality of time selection fields for selecting respective incremental time indexes responsive to receipt of the user action command with the cursor positioned on the time selection field of the respective incremental time index to be selected ~~on action input~~, the respective incremental time indexes having respectively different magnitudes;

a calculator for calculating a new time of transmission for display by adding the selected incremental time index to a time value in the current time interval;

wherein, the display displays the program guide information for the new time of transmission.

9. (Previously Presented) The apparatus of claim 8 wherein the plurality of time selection fields includes a page field, and

the selected incremental time index is a six-hour incremental time index when the page field is selected.

10. (Previously Presented) The apparatus of claim 9 wherein the plurality of time selection fields further includes a day field, and

the selected incremental time index is a 24-hour incremental time index when the day field is selected.

11. (Previously Presented) The apparatus of claim 10 wherein the plurality of time selection fields includes a date field, and

the selected incremental time index is a seven-day incremental time index when the date field is selected.

12. (Previously Presented) The apparatus of claim 8 wherein the time selection fields determine a magnitude of the selected incremental time index and the apparatus further includes first and second direction inputs for selecting an arithmetic sign of the selected incremental time index.

MATP-598US

13. (Original) The apparatus of claim 8 wherein the calculator limits the program guide information at current time of transmission, if the calculated new time of transmission is earlier than the current time of transmission.

14. (Original) The apparatus of claim 8 wherein the calculator limits displaying the program guide information at a latest time of transmission, if the calculated new time of transmission is later than the latest time of transmission, the latest time of transmission corresponding to the latest program guide information stored in the memory device.

15. (Original) The apparatus of claim 14 wherein the apparatus is a set top box.

16. (Previously Presented) The method of claim 1, further including the step of assigning a value to at least one of the incremental time indexes of the respective time selection fields.

17. (Previously Presented) The Apparatus of claim 8, wherein the processor further includes software for assigning a value to at least one of the incremental time indexes of the respective time selection fields.
